Commitment to achieving Net Zero

PAJUNK UK MEDICAL PRODUCTS LTD is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2023	
Additional Details relating to the Baseline Emissions calculations.	
<i>The baseline CCF is the initial creation of the CCF. No prior corporate carbon footprints have been created that were in line with the GHG Protocol.</i>	
Baseline year emissions:	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	11,51
Scope 2	Location Based: 3,01 Market Based: 2,96
Scope 3 (Included Sources)	145,81
Total Emissions	Location Based: 160,33 Market Based: 160,28

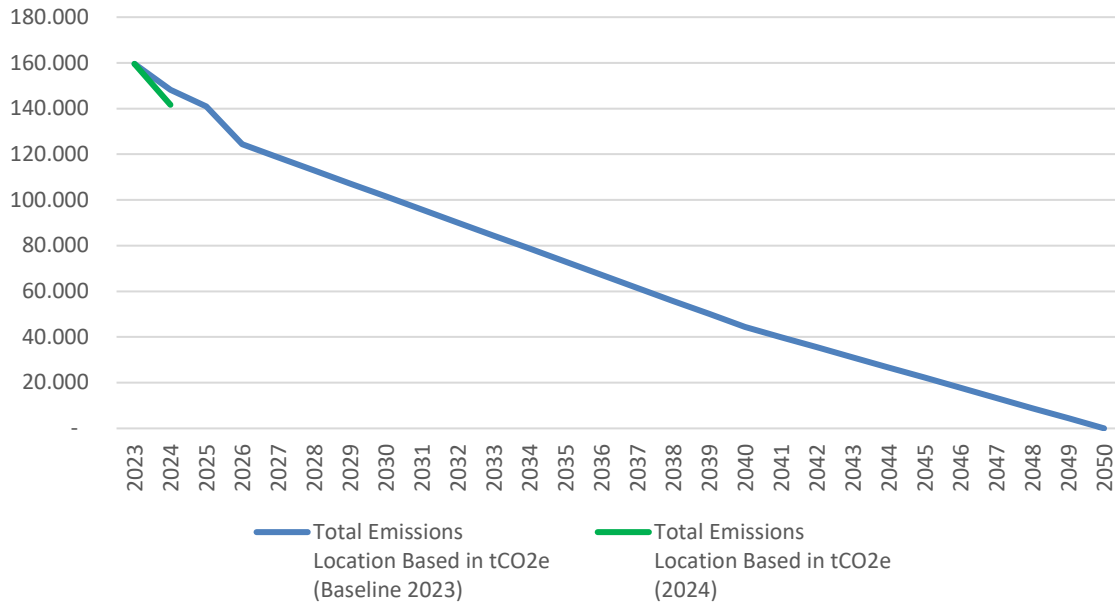

Current Emissions Reporting

Reporting Year: 2024	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	12,40
Scope 2	Location Based: 3,95 Market Based: 2,42
Scope 3 (Included Sources)	126,83
Total Emissions	Location Based: 143,18 Market Based: 141,65

Emissions reduction targets

We project that carbon emissions will decrease continuously each year until 2050. Progress against these targets will be submitted in the upcoming CRP updates.

Total Emissions_Market_Based on tCO2e (Baseline 2023)

Total Emissions_Location_Based on tCO2e (Baseline 2023)

Carbon Reduction Projects

The following environmental management measures and projects have been completed or implemented since the 2023 baseline. The carbon emission reduction achieved by these schemes equate to 18,63 tCO₂e, a 12% reduction against the 2023 baseline and the measures will be in effect when performing the contract

Switch to Green Energy Contract

Description: We have switched to an electricity contract with 100% renewable energy to eliminate the market-based emissions associated with our electricity consumption. The switch took place in June 2024 and implies that our market-based emissions will be zero from 2025.

Implementation: in 2024

Install LED Lighting with Motion and Daylight Sensors

Description: We have replaced all traditional lighting systems with energy-efficient LED lighting across our buildings. In parallel, motion and daylight sensors were also installed. These systems are designed to optimise energy use by adjusting lighting based on occupancy and natural light levels. This upgrade is a key component of our energy conservation strategy, aimed at reducing our electrical consumption and saving resources.

Implementation: in 2024

Optimize Transport Scheme for In-Person Sales Visits

Description: We are working to minimise the emissions associated with face-to-face sales visits by optimising travel planning and choosing environmentally friendly modes of transport. Sales staff are asked to hold meetings online where possible and to choose Uber Green when travelling by taxi.

Implementation: ongoing

Work with Suppliers to Reduce Their Emissions

Description: We are actively working with our suppliers to encourage the adoption of lower-emission practices and technologies. This collaborative effort is designed to enhance the sustainability of our supply chain. We have already switched our packaging material to recycled paper.

Implementation: ongoing

Employee Sustainability Training and Engagement

Description: We are educating and reminding our employees about sustainable practices and the important roles they play in reaching our environmental goals. This continuous engagement is designed to foster a proactive culture of sustainability at all levels of our organization.

Implementation: ongoing

In the future we hope to implement further measures such as:

Fuel Substitution

Description: We plan to switch from natural gas to biomethane, a renewable biofuel produced naturally through the decomposition of organic waste. This transition reflects our endeavour to significantly reduce our dependence on fossil fuels and thus reduce our operational carbon footprint.

Planned implementation: from 2026

Install PV Systems

Description: We are evaluating the introduction of Photovoltaic (PV) systems to generate electricity from solar energy. This initiative is aimed at reducing our reliance on conventional power sources and minimizing our environmental impact, supporting our long-term strategy toward energy self-sufficiency.

Planned implementation: tbd

Install Water Efficiency Measures

Description: We plan to implement advanced water efficiency systems and practices within our operations to better manage water usage. For example, we intend to install dual-flush toilets and water-saving urinals. We will also examine the possibility of collecting rainwater for reuse in our lavatories.

Planned implementation: in 2025

Incentivize Employees to purchase or lease Electric Vehicles (EVs)

Description: We will consider promoting the use of low-emission vehicles among our employees by offering incentives for the purchase of electric vehicles. This program supports our goal of reducing emissions from business travel and commuting, our main sources of emissions. However, the national infrastructure must first be developed so that it is feasible to travel anywhere in the UK by electric vehicles. This is why we have moved the beginning of the measure to 2030.

Planned implementation: from 2030

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:
