

IntraLong

Catheter Set for
Continuous Spinal Anaesthesia

Continuous Spinal Anaesthesia is often used in orthopedics and for large-scale tumor operations. PAJUNK® offers a special ramped SPROTTE® needle that allows for a small size catheter placement through the needle into the intrathecal space. The sets include additional accessories like filter and dosing syringe

Depth Markings

Graduations on the first 30cm

- Easy determination of the catheter
- Easy to read and identify

Catheter Options

- With central opening (27G)
- With closed tip and three lateral openings (25G)

Sprotte Special Tip with Ramp

- Reduces the chance of shearing off catheter
- Easy catheter threading

Atraumatic Tip Design

The ogive shaped tip significantly reduces the risk of PDPH and the rounded edges of the lateral eye minimise trauma to the dura mater.

- Minimises chance of PDPH³
- Consistent tactile feedback

Lateral Eye

Burr-free, rounded atraumatic edges

- Optimised gliding properties
- Minimum chance of tissue coring and carry-over into the subarachnoid space

Further Features

Optimal Lateral Eye Size and Placement

- Unobstructed backflow, even if the eye is partially blocked by the arachnoid membrane
- Allows for quicker CSF flashback¹

Precision-Ground Metal Stylet

- Lateral eye closes precisely to minimise chance of tissue coring²
- Polished, rounded tip prevents abrasion on the inner needle tube

Standard Hub

- Designed for rapid detection of even the smallest quantities of CSF
- Reduced inner space

Highest Processing Quality

- High quality stainless steel needle for increased stability
- Smoothly polished and burr-free surface and inner lumen designed for optimised gliding properties and CSF backflow
- Consistent feel and reliable performance
